

User Persona Assignment

Name: Sara Ajay Khare
UCID: 2024510028

Name: Akanksha Hake
UCID: 2024510019

Assumptions

- The college app is meant for all students across different years.
- Each year of study has different priorities (first-year → academics & schedules, second-year → activities, final-year → placements & deadlines).
- Students currently rely on multiple channels (WhatsApp, Telegram, notice boards, word-of-mouth), which creates confusion.
- The app should serve as a centralized platform that reduces clutter and helps students organize academics, events, and personal activities.

User Personas (Created using Miro Tool)

Persona 1 – Aheli Sen

- Age: 18, First-year MCA Student
- Background: Just moved to campus, new to college life. Struggles to manage class schedules and remember announcements.
- Goals:
 - Keep track of classes & assignments
 - Stay updated on important academic info
- Frustrations:
 - Confused about timetable changes
 - Misses updates due to scattered WhatsApp groups
- Motivations: Wants to feel organized and confident in her academics.
- Design Implications:
 - Class schedule with reminders
 - Centralized announcements section
 - Assignment tracker

Persona 2 – Hriday Jasani

- Age: 20, Second-year Engineering Student
- Background: Active in sports and clubs. Wants to balance academics with extracurriculars.
- Goals:
 - Discover and register for events easily
 - Manage personal + academic commitments
- Frustrations:
 - Event details scattered in multiple groups
 - Hard to balance study time with club activities
- Motivations: Wants to stay involved in campus life without affecting academics.
- Design Implications:
 - Events & club updates section
 - Personalized calendar with academic + social reminders
 - Notifications for new events

What has **enabled** effective campus life for him?

What has **hindered** effectiveness?

What would be your **essential principles** for distributed working?

Persona 3 – Sanya Gupta

- Age: 22, Final-year MCA Student
- Background: Preparing for placements. Wants efficiency in managing deadlines.
- Goals:
 - Track placement/internship deadlines
 - Get reminders for exams & tasks
- Frustrations:
 - Overloaded with messages in placement groups
 - Forgets deadlines due to lack of central tracking
- Motivations: Wants to stay career-focused and stress-free.
- Design Implications:
 - Placement & internship updates section
 - Deadline/task manager with notifications
 - Integration with resume/career services

Questions:

1. What is a User Persona?

A user persona is a fictional but research-based representation of a typical user that includes their goals, needs, frustrations, and behaviors. It helps designers understand the target audience better.

2. Why is it important to create Persona?

- Keeps the design user-centered
- Helps teams empathize with real users
- Guides feature prioritization based on needs
- Ensures that the app solves actual student problems

3. How many personas do you need to create normally in a project?

Typically, 2–5 personas are created in a project. Too few may miss key user types, while too many may complicate the design. For this project, 3 personas are sufficient to cover first-year, second-year, and final-year needs.
